

Capabilities Summary

InnoH2O Services, an arm of InnoH2O Solutions, LLC, specializes in innovative and comprehensive water treatment in Pennsylvania, Maryland, and West Virginia. We apply a fixed-cost Treatment-as-a-Service (TaaS) model to our water treatment eliminating the variability of cost and allowing operators and state agencies to budget and plan easier.

Treatment System Operation

InnoH2O will manage and operate your treatment systems for a firm-fixed monthly cost. No scale too small or large, our technicians are familiar with the operation of lime, caustic and passive technologies. Includes monthly sampling for treatment systems. TaaS contract can also include sludge pumping, full-service sampling, and site maintenance. All-inclusive pricing – the cost we give is your cost of treatment!

Typical Features, Specs and Applications:

- Caustic, lime, or passive treatment technologies; other systems too (ammonia, etc.)
- Fully inclusive pricing – one price does it all, no nickel-and-dime hidden costs
- Collect monthly/quarterly samples, deliver to a certified laboratory and summarize results monthly; provide monthly reports to client; can also input results into DEP online websites
- Deployment of treatment automation technology included with monthly price

Water Sampling, Data Collection, Controls and Engineering

Unlike others, we won't charge you for every hour we work on your project – we give you a fixed monthly price for grabbing your samples, doing site data collection and supporting any engineering needs you may have (through our partners). Don't get stuck in the hours & mileage trap – call us to know your cost ahead of time!

Typical Features, Specs and Applications:

- Pull monitoring points, treatment (if requested) and quarterly samples on a firm monthly price
- Monitor and maintain sed ponds
- Install and maintain turbidity curtains
- Deploy data collection equipment available to operator with remote logins
- Develop site plans, support permit applications, provide input to operator on treatment methods and technologies, general consulting – all on a firm, fixed price

Items typically beyond TaaS scope (unless negotiated in contract):

- Capital Equipment failures and replacements
- Upgrades to or new treatment facility construction
- Snow removal from access roads on events exceeding 12" of accumulation
